

Tabela Suplementar 1. CERRADO - Porcentagem de representação da distribuição geográfica das 2.107 espécies da flora brasileira ameaçada de extinção nos diferentes recortes de área total priorizada (17, 25 e 50% da área total). Para cada recorte de priorização, os valores de representação são apresentados apenas nas áreas indicadas como prioritárias, nas áreas prioritárias em conjunto com o que está representado em Unidades de Conservação e nas áreas prioritárias em conjunto com o que está representado em Unidades de Conservação e Terras Indígenas.

Familia	Nome científico	Autor	Categoria de ameaça	Representação em UCs (%)	Representação em TIs (%)	Área priorizada (17%)		Área priorizada (25%)		Área priorizada (50%)		Espécies lacuna
